

## About Me

I'm Mehran Zand a programmer and founder who emphasizes on the business value and quality together. Having years of experience of technical stuff in the field of software development, as a developer, architect and project manager in various companies as well as a deep entrepreneurial vision has enabled me to better help companies.

## SKILLS

I write mostly in C#, but also in Python and JavaScript, In fact, every day I get involved in many frameworks, languages, technologies, tools and so on. The following is a list of my important skills.

- Manage the designing, building, configuring, and exposing of cloud native applications.
- Define application resources and use core primitives to build, monitor, and troubleshoot scalable applications and tools.
- Manage higher-level programming languages such as Python, Node.js, Go, or Java.

- Develop creative solutions for automating deployment and configuration.
- Assist team with merge request debug and code contributions.
- Design framework, API and infrastructure based on Micro-services Architecture.
- Proficient with .Net Core and full framework using C#.
- Integrate, deploy and run applications by container-based Docker.
- Proficient with Rabbitmq, Redis, MongoDB, Ocelot.
- JavaScript, TypeScript and client side technics.
- Design and build mobile applications for the iOS and Android platforms.
- Proficient with Objective-C, Swift and cocoa touch.
- Proficient with React and React Native.
- Proficient with Angular.

## **EDUCATION**
